

Easy Step-by-Step Instructions

1

Start with damp hair and apply a heat protectant or favorite styling product.

2

Stand brush barrels on end in an easy-to-reach location. Attach the handle to each barrel with a click.

3

Work with one section of hair at a time. Use the Click n Curl round brush and a hairdryer to smooth and dry hair from root to tip.

To create maximum volume, keep hair taut and lift upwards and outwards while drying. To prevent tangles, avoid catching hair from other sections.

When the section of hair is dry, wrap it around the barrel, making sure that it lies on top of the brush and that the ends are smooth against the barrel.

Each section of hair should be no wider than the barrel. If the section of hair covers the bristles completely when wrapped, then you are working with too much hair at a time. The barrel will not stay in place if the hair completely covers the tips of the bristles.

7

Style and finish your look. You'll feel fresh and confident that you've achieved a professional looking blowout with amazing volume and stunning curls!

6

Once the barrels have completely cooled, slowly unwind them using both hands, in an upward and outward direction. Never pull downward and avoid catching other sections of hair to prevent tangles.

4

Continue rolling until the barrel is tight against the scalp and at the root of that section. Then give the brush a gentle shake against the scalp to set the roller in place and release the handle.

5

Attach the next barrel and repeat steps 3 and 4 until every section has been rolled tightly.
